

API Access-Control Assessment Report

Report ID: 18c13b06a0b4555b17fa2991cbf1810cba522354aaba1510
Kind: workflow Status: done / Report ready
Target: http://demo-api:4100/
Created: 2026-08-21T09:09:09.618Z Expires: 2026-08-28T09:09:09.618Z

Summary

verified: 0 detected: 0 suspected: 0 needs-verification: 0 passed: 6 not-tested: 0 error: 0

Warning: Workflow execution is restricted to a verified allowlisted local asset and the `/__ac_test__` namespace.

Warning: Verified means an observed allow/deny result contradicted the explicit expected decision for that step.

Warning: Remaining steps are skipped after the first mismatch or indeterminate result because later evidence is unreliable.

Warning: Credentials and acquired tokens are used in memory only and are excluded from findings and reports.

Authorization matrix

POST `/__ac_test__/resource-json-login` | Alice json-login | expected allow | actual allow (201) | match
PUT `/__ac_test__/resource-json-login` | Alice json-login | expected allow | actual allow (200) | match
PATCH `/__ac_test__/resource-json-login` | Alice json-login | expected allow | actual allow (200) | match
GET `/__ac_test__/resource-json-login` | Alice json-login | expected allow | actual allow (200) | match
DELETE `/__ac_test__/resource-json-login` | Alice json-login | expected allow | actual allow (204) | match

Findings

1. [passed] Workflow step create completed

API5:2023 | info | high confidence

Location: `/__ac_test__/resource-json-login`

The observed allow/deny outcome was compared with the explicit expected decision for this step.

step: create

method: POST

expected: allow

actual: allow

status: 201

Recommendation: Confirm the declared policy, then fix authorization enforcement and retain this workflow as a regression test.

2. [passed] Workflow step replace completed

API1:2023 | info | high confidence

Location: `/__ac_test__/resource-json-login`

The observed allow/deny outcome was compared with the explicit expected decision for this step.

step: replace

method: PUT

expected: allow

actual: allow

status: 200

Recommendation: Confirm the declared policy, then fix authorization enforcement and retain this workflow as a regression test.

3. [passed] Workflow step patch completed

API1:2023 | info | high confidence

Location: `/__ac_test__/resource-json-login`

The observed allow/deny outcome was compared with the explicit expected decision for this step.

step: patch

method: PATCH

expected: allow

actual: allow

status: 200

Recommendation: Confirm the declared policy, then fix authorization enforcement and retain this workflow as a regression test.

4. [passed] Workflow step read completed

API1:2023 | info | high confidence

Location: /__ac_test__/resource-json-login

The observed allow/deny outcome was compared with the explicit expected decision for this step.

step: read

method: GET

expected: allow

actual: allow

status: 200

Recommendation: Confirm the declared policy, then fix authorization enforcement and retain this workflow as a regression test.

5. [passed] Workflow step delete completed

API1:2023 | info | high confidence

Location: /__ac_test__/resource-json-login

The observed allow/deny outcome was compared with the explicit expected decision for this step.

step: delete

method: DELETE

expected: allow

actual: allow

status: 204

Recommendation: Confirm the declared policy, then fix authorization enforcement and retain this workflow as a regression test.

6. [passed] Workflow cleanup completed

API5:2023 | info | high confidence

Location: /__ac_test__/

The scanner attempted DELETE cleanup in reverse order for every mutated test path.

pathsAttempted: 1

cleanupSucceeded: true

cleanup:/__ac_test__/resource-json-login: 404

cleanupVerified:/__ac_test__/resource-json-login: true

Recommendation: Investigate any unverified cleanup before re-running the workflow.

Generated by API AC Scanner V3.1. Secrets are excluded or redacted. Findings require authorized review.
